COVER LETTER

Hi, I am Nara lee studying at Fanshawe college.
My background is in Internet Applications and web development.

I have been studying web-related languages and I'm building applications with React.js, JavaScript, CSS, and HTML.

When I was building my own projects, I focused on REST API and a web browser. I also tried to make more reusable components with React.js.

Furthermore, I'm keen to learn new things not only programming languages but also data structure and algorithms that can make me more good developer in the near future.

My principle as a front-end developer is writing clean and well-designed code. Instead of copying code for no reason to complete the function, I want to be a person who always thinks about why this code is written in this way or there is no better way to improve performance.
